Es handelt sich um insgesamt 2 Artikel auf Englisch, die das Hintergrundfeld (Nullpunktfeld) beschreiben, das im sog. 'Quanten-Vakuum' ernsthaft vermutet wird. , abstract: The Background Field (BF) is an advanced figurative quantum model of the Zero-Point Field, the probable origin of inertia, gravity and EM fields. It explains too, why the speed of light is limited, and unclear phenomena like 'antigravitation' and the Tunnel Effect by means of interactions between elementary particles and the BF. The BF fills up the whole universe and represents therefore a resistance to any moving particle, even to light. Our universe consists of a BF located inside an absolute void space. We can imagine the BF as a 3-D matrix of virtual gravitons linked by strings. The tension of the strings produce the resistance, we know as 'inertia'. Contraction of the BF produces gravitation, while a spinning BF produces EM-fields. If we made a 'hole' in the BF, this hole would have no more any inherent resistance, thus allowing to increase the velocity of particles beyond c . Such tiny holes in the BF are probably the origin of the 'Tunnel Effect' . This effect is the first evidence for the BF. A second evidence for the BF is the higher temperature of the solar corona (up to 2×10^6 °C) with respect...
